

EXOTANIUM

ABOUT US

Exotanium, Inc. is developing cloud-native application containers that are secure and fast. Containers are revolutionizing development and operations (DevOps) for businesses in the cloud where both security and performance are paramount. Exotanium X-Containers support business needs with strong security, high performance, customizability, and low cost. Exotanium X-Containers also prevent vendor lock-in with portable, hybrid, and multi-cloud orchestration. See our pitch at the [Cornell Entrepreneurship Summit 2018](#).

WHAT IS NEW

- We released the X-Container community version (v1.0.1) in June! Try it out [here](#) and [let us know](#) if you have any questions or feedback.
 - We have doubled in size! We brought in two new software engineers and one business administration expert.
 - We were awarded Cornell Technology Acceleration and Maturation (CTAM) funding!
 - We signed an exclusive license agreement under patent rights with Cornell CTL for using and commercializing the innovative X-container architecture.
-

OBSTACLES ENCOUNTERED

- We did not foresee our team growing as fast as it has, resulting in a shortage of office space! Now we have to redesign the area or apply for larger offices as well as take into consideration the potential growth rate of our team.
-

PLEASE HELP

- Please introduce us to potential customers in the Washington and New York metropolitan areas whose computing needs are sensitive to container security and performance.
